Fatent No. 6703492

GENERAL INPORMATION

TITLE OF INVENTION: STAPHYLOCOCCUS EPIDERMIDIS NUCLEIC ACIDS AND PROTEINS
FILE REFERENCE: PUJ48002

FULLE REFERENCE: 19048002

CURRENT APPLICATION NUMBER: 05/09/710,279

CURRENT FILING DATE: 2000-11-09

PRIOR FILING DATE: 1999-11-09

NUMBER OF SEQ ID NOS: 4472

SOFTWARE: Patentin Ver: 2.1

LENGTH: 224
APPLICANT: KIMMERLY, WILLIAM JOHN
TITLE OF INVENTION: STARHYLOCCCUS EPIDERMIDIS NUCLEIC ACIDS AND PROTEINS
FILTE SEPRENCE: PU3-480US
CURRENT PELICATION NUMBER: US/09/710,279
CURRENT APPLICATION NUMBER: US/09/11-09
PRIOR APPLICATION NUMBER: 60/164,258
PRIOR PILING DATE: 1999-11-09
PRIOR FILING DATE: 1999-11-09
SOFTWARE: PATENTIN OF SEQ ID NOS: 4472
SOFTWARE: PATENTIN VEr. 2.1
SEQ ID NO 3114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Sequence 4753, Application US/09543681A

Sequence 47510

TITLE NO. 6605709

TITLE OF INVENTION: UNGLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL.

TITLE OF INVENTION: UNWHER: US/09/543,681A

CURRENT RAPLICATION UNMER: US/09/543,681A

CURRENT RAPLICATION NUMBER: US/09/543,681A

PRIOR APPLICATION NUMBER: US/09/2406

PRIOR PILING DATE: 2000-04-09

NUMBER OF SEQ ID NOS: 8344

SEQ ID NO 4753

LENGTH: 334

TYPE: PRT

TYPE: PRT

CREAM: Proteus mirabilis

US-09-543-681A-4753

DB 4; Length 334; 26.7%; Score 56; Query Match

US-0-3-40-0-204-305

Sequence 55, Application US/09340620A

Patent No. 6482933

GENERAL INFORMATION:

APPLICANT: Bertin, John

TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED PROTEIN FAMILY AND USES THEREC

FILE REPERRNCE: 07334-124001

CURRENT APPLICATION NUMBER: US/09/340,620A

CURRENT FILING DATE: 1999-06-28

PRIOR FILING DATE: 1999-02-05

PRIOR FILING DATE: 1999-12-06

PRIOR APPLICATION NUMBER: US 09/245,281

PRIOR FILING DATE: 1998-12-06

PRIOR PAPLICATION NUMBER: US 09/09,041

PRIOR PLING DATE: 1998-06-17

PRIOR FILING DATE: 1998-06-17

PRIOR FILING DATE: 1998-06-17

SOFTWARE FILING DATE: 1998-22-06

NUMBER OF SEQ ID NOS: 71

SOFTWARE FALSES FARSES FOR Windows Version 4.0

                                                                                                                                                                                                                                                                                              US-09-248-796A-14868
Sequence 14868, Application US/09248796A
Patent No. 6747137
GENERAL INFORMATION:
TITLE OF INVENTION: WOLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFRENCE: 107196-132
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT FILING DATE: 1998-02-12
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR APPLICATION NUMBER: US 60/096,409
PRIOR APPLICATION NUMBER: US 60/096,409
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 14868
LENGHH: 298

-!- FUNCTION: Calsequestrin is a high-capacity, moderate affinity, calcium-binding protein and thus acts as an internal calcium store in muscle. The release of calcium bound to calsequestrin through a calcium release channel triggers muscle contraction (By similarity).

01-MAR-2003 (TrEMBLrel. 23, Last annotation update)
Hypothetical protein PFI0585c.
Name-PPI05885c;
Plasmodium falciparum (isolate 3D7).
Bukaryota, Alveolata, Apicomplexa, Haemosporida, Plasmodium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB 1; Length 1116; 93;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /cgn2_6/ptodata/1/iaa/5A_COMB.pep:*

Sequence 32954, Application US/09252991A

Sequence 32954, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196, 136

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

US-09-513-999C-7998
Sequence 7998, Application US/09513999C
Patent No. 6783961
GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Giordano, J.Y.
TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
PATEL REPERBNOE: 59.US2.REG
CURRENT FILING DATE: 2000-02-24
PRIOR FILING DATE: 1999-02-26
NUMBER: OF SEQ ID NOS: 36681
SOFTWARE: Patent.pm
SEQ ID NO 7998
LEMOTH: 204
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB 4; Length 204;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENERAL INCOMMATION:

Sequence 7, Application US/10417700A
Publication No. US20040033581A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: ECOPIA BIOSCIENCES INC.
APPLICANT: ZAZOPOULOS, Emmanuel
APPLICANT: STAFPA, Alfredo
APPLICANT: FARRET, Chris
IITLE OF INVENTION: Specialized dual condensation/epimerization domain in non-ribosom
APPLICANT: La Rosa, Thomas J.
APPLICANT: Kovalic, David K.
APPLICANT: Town, Yihua
APPLICANT: Cao, Yongwei
TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated With
TITLE OF INVENTION: Plants
FILE REFERENCE: 38-21 (53222)B
CURRENT APPLICATION NUMBER: US/10/425,115
CURRENT FILING DATE: 2003-04-28
SEQ ID NOS: 369326
SEQ ID NO 333161
LENGTH: 61

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
